

Student Mental Health Score Analysis, Internship Project

Tech Stack: Python, Pandas, NumPy, Matplotlib, Seaborn

- Analyzed student mental health data to identify the impact of academic and lifestyle factors on well-being scores.
- Applied data preprocessing and EDA techniques to uncover meaningful patterns related to stress, sleep, and study habits.
- Built insightful visualizations using Matplotlib and Seaborn to present actionable recommendations for improving student well-being.

CERTIFICATES & ACHIEVEMENTS	
Google Data Analytics	09/2025
Data Visualization with Python	06/2025
Intern BrainyBeam	06/2025
Co-curricular: Have achieved 'C'Certificate in NCC	02/2025
Learntube Advanced Python	09/2024
